Hardiness Zones: 5 - 9

Possible Problems: Insect: Slugs and snails can be an issue

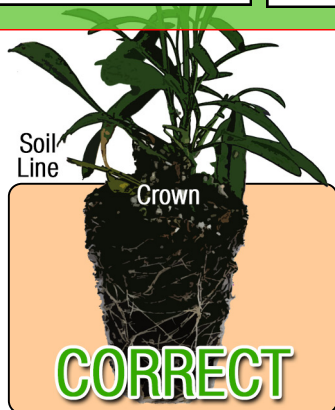

Habit: Upright, clumping

Diseases: No major diseases

Day Length for Flowering: Long day

Do NOT bury the crown of the plug

Description

A very elegant sport of T. 'Empress' with cream and deep green variegated leaves and dark stems. The orchid-like flowers are heavily purple spotted over a white base. Flowers from August through September atop a compact plant. Prefers moist, woodland conditions. The Japanese will hold this one high! The roots need to be warm for the leaves to express the variegation.
